How to Play Piano for Beginners

Course Notes

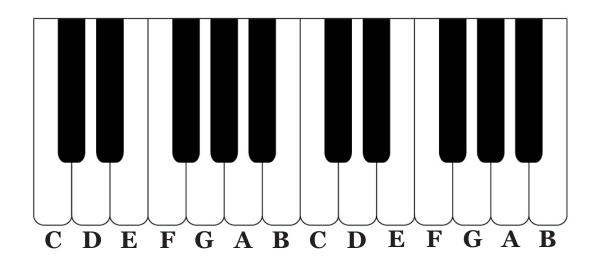

by Bill Hilton

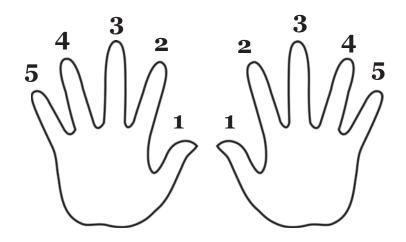

These notes accompany my series of 21-part free piano course on YouTube. The notes for lessons 1-20 (lesson 21 has no notes) are also available as separate PDFs at www.billspianopages.com/beginners. This document simply combines them into a single, easy to download PDF.

If you've come across these notes and you're interested in learning the piano, you'll find a full list of the tutorials in the course at:

https://www.youtube.com/playlist?list=PLpOuhygfD7QnP46wUgQudOySX_z2UOhXs

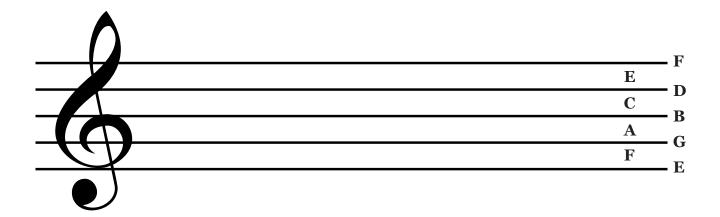

Beginners' piano course: Lesson 1 notes

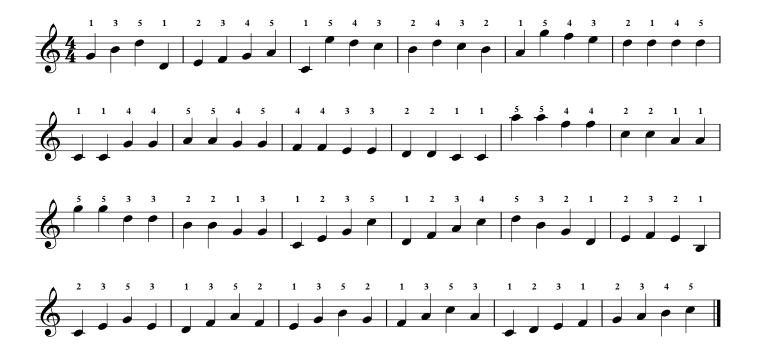

Beginners' piano course: Lesson 2 notes

The stave, with treble clef

The lowest line of the stave represents the E above middle C. The highest line represents the F above the C above middle C.

Single note exercise

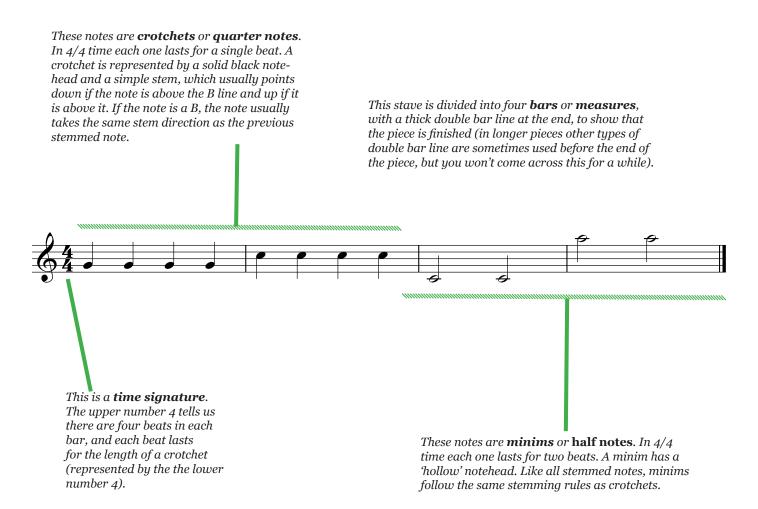

Note pairs exercise

Beginners' piano course: Lesson 3 notes

1. Some reminders...

(a) This is the exercise we looked at in the tutorial. Remember andante means 'at a walking pace' - but you have a fair amount of freedom to interpret what that means. Aim to play this, and the other exercises, evenly and smoothly against a steady beat.

Andante

(b) Allegro is usually interpreted as something like 'fast and lively' - but not too fast, and certainly not as fast as possible. Try to play it noticeably quicker that exercise (a), while still being smooth and even. Don't worry if you can't go too quickly: it's more important to play it well, and precisely against the beat.

Allegro

(c) Lento means 'slowly', but that doesn't mean you should stop and start - this should be slower than the andante of exercise (a), but still regular. There's some interesting fingering going on here. We'll discuss this sort of thing more in the next couple of lessons, but for now follow the fingers carefully. Between the G at the end of bar 4 and the C at the start of bar 5 you have to jump (both use fifth finger). But when you get to the F with thumb in bar seven, don't jump to get your third finger on the next note, the E. Instead, move your third finger over your thumb. Likewise with the thumb and second finger on the final C-B-C.

Lento 5 1 5 1 5 4 3 2 3 1 4 2 1 5 5 1 5 1 5 4 3 2 1 3 2 1 2 1

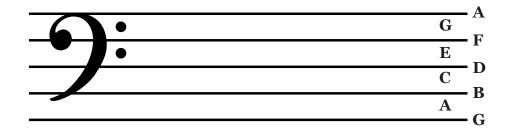

(d) Moderato means 'at a moderate speed' - so not too fast, not too slow. As I said in the tutorial, this tune is a little different because it has three beats in the bar. We won't discuss the implications of that now - just remember to count 1-2-3 rather than 1-2-3-4, and remember that the crotchets and minims still have the same values as they do in 4/4 time. So, for example, in the last bar the minim lasts for beats 1 and 2 and the crotchet is on the third beat.

Moderato

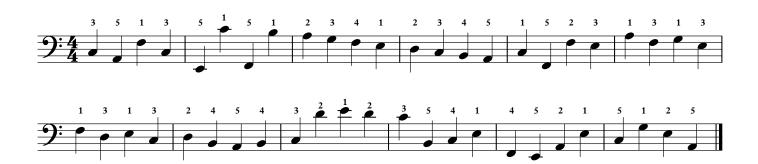

Beginners' piano course: Lesson 4 notes

1. The bass clef and stave

The highest line of the stave is the A immediately below middle C on the piano keyboard.

Use the exercise below to help you learn the notes of the bass stave. Play each note with the finger marked (remember, the left hand numbers fingers 1-5, from thumb out to little finger, in a mirror image of the right hand) and name each note as you play it.

Scale of C major, right hand, one octave:

Scale of C major, left hand, one octave:

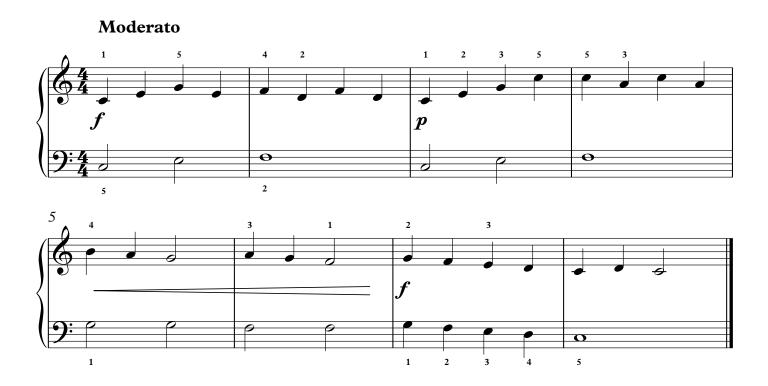

Beginners' piano course: Lesson 5 notes

Piece 1

Piece 2

This is the piece I didn't play through in the tutorial. Have a go at it for yourself, and we'll look at it in detail at the start of the next tutorial. Couple of things to watch out for:

- 1. Moderato means 'at a moderate speed'.
- 2. The dynamic change between f (loud) and p (soft) in bars 3/4 is quite sudden: make sure it's clear without being ridiculously over the top. When you get to the crescendo (getting louder) hairpin in bars 5/6 make sure the increase in volume is steady.
- 3. The fingering in bar 7 might look tricky at first, but it's just the same as a descending C major scale, played two hands together.

Common dynamic terms

pp (Italian: pianissimo): very soft

p (Italian: piano): soft

mp (mezzo piano): moderately soft

mf (mezzo forte): moderately loud

f (forte): loud

ff (fortissimo): very loud

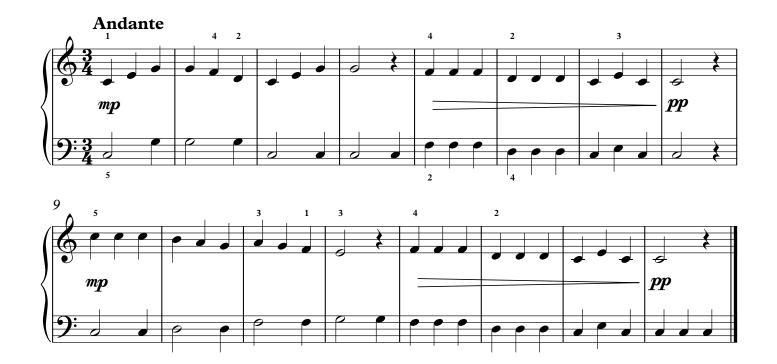

Mezzo is pronounced "MET-zo" and forte is "FOR-tay".

crescendo (pron. "kre-SHEN-doh", widening hairpin): get louder

diminuendo ("dim-in-you-END-oh", narrowing hairpin): get softer

Beginners' piano course: Lesson 6 notes

Lullaby

Some important rests...

This bar contains two crotchet (quarter note) rests on beats 2 and 4.

This bar contains a minim (half note) rest on beats 3 and 4.

The first bar of this stave contains a semibreve (whole note), and the second bar contains a semibreve rest, covering all four beats.

An important thing to remember about rests is that, unlike notes, they *almost* always appear in the same position on the staff. So the crotchet rest always stretches from the top space to the bottom, the minim rest always sits on top of the middle line and the semibreve rest always hangs from the second line from the top, whatever clef you are in. Exceptions are possible, especially when two 'voices' (i.e., melodies, usually) are being represented on the same clef and one has a rest at a point when another doesn't. However, these are relatively rare, at least in the kind of music you'll be dealing with in the early stages of learning to play the piano.

The scale of G major, left and right hands

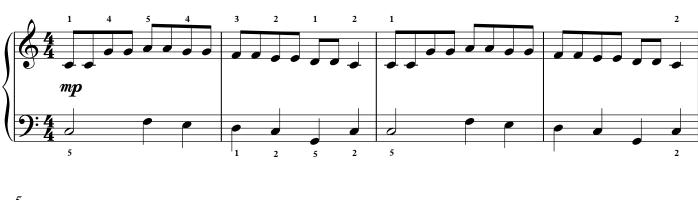

Note that the F sharp (F#, see video for explanation) is notated in both clefs as a regular F (i.e., top line of the treble stave, second-from-top line of the bass stave) with a sharp sign (#) in front of it.

In music we always call # a 'sharp sign', and never a 'pound sign' or 'hash'. There are other ways of showing that the F is an F sharp (for example, by using a key signature, which we'll learn about soon). If we simply do it by putting the sharp sign in front of the note, as we have done here, we refer to the sign as an *accidental*.

Beginners' piano course: Lesson 7 notes

Twinkle Twinkle Little Star (...sort of)

NB the little 'hats' over the final Cs in treble and bass clefs the final bar are pause signs. Pause signs tell you that you should pause and linger on the note (or rest) a bit longer than the written length suggests. Pauses can appear anywhere in a piece of music, but I've included these on the final notes to give the piece a more definite and satisfying ending.

The Italian word for a pause sign is *fermata*.

Practise your accidentals

Play through each of the following snippets and work out which notes are natural (i.e. the ordinary white notes) and which are being sharpened by accidentals. Remember that accidentals hold their force for the rest of the bar that contains them, and are cancelled by bar lines and natural signs. I've included courtesy accidentals where relevant.

Answers are on the next page (no peeking!).

Answers

n = natural

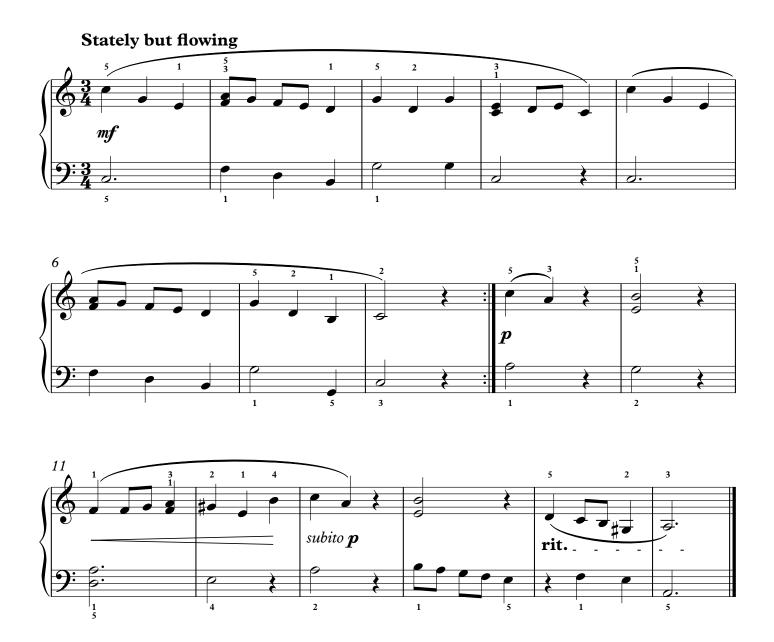

s = sharp

Dance

P.S. I didn't say this in the video, but don't forget to keep practising the scales of C major and G major. We'll be learning more scales in lesson 9!

Beginners' piano course: Lesson 9 notes

There isn't anything much here that you haven't seen before. The only slightly new thing are the double repeat marks at the start of bar 9 and the end of bar 16. These show that you play the section within the repeat marks twice (in tutorial 8's piece the repeat started from the start of the piece, and what that happens convention dictates that an 'opening' repeat mark isn't needed). So here you play bars 1-8, then bars 9-16, then bars 9-16 again. You'll also find a couple of dotted minims — I discussed those in the tutorial.

Beginners' piano course: Lesson 10 notes

1. This week's piece:

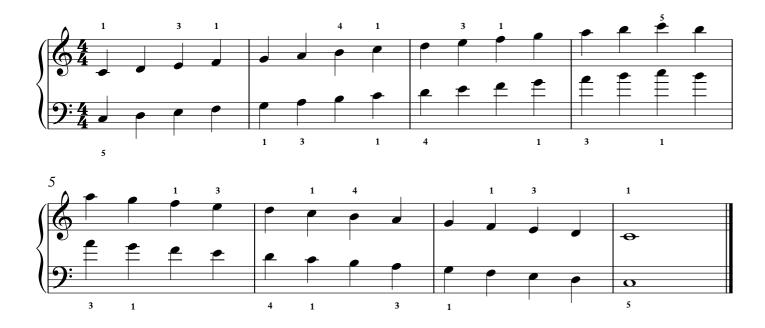

2. All the scales we've covered so far...

As I mentioned in the tutorial, I'm including in this document both the new scales and the ones we've already done. I've scored them in two octaves, hands together — thought don't worry if you're still playing most of them hands separately, or just hands together over one octave, for a while yet.

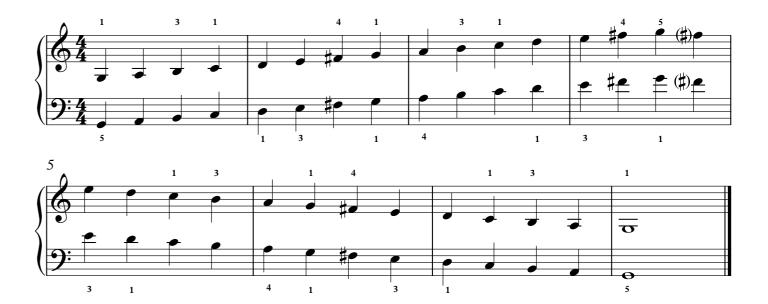

Because these are scored for two octaves you'll notice there are some pretty dramatic ledger lines. I've scored the scales like this partly out of necessity and partly because I want you to have some practice figuring out notes above and below the stave. If you get stuck, refer to my demonstrations of each scale in the tutorial to figure out which note is which.

Accidentals in brackets are courtesy accidentals - they don't have to be there (because, if you recall, once a note has been given an accidental it stays in force for the rest of the bar) but I've put them in to help you visualise the structure of the scales more clearly.

3. Blues in C

Steadily, with medium swing

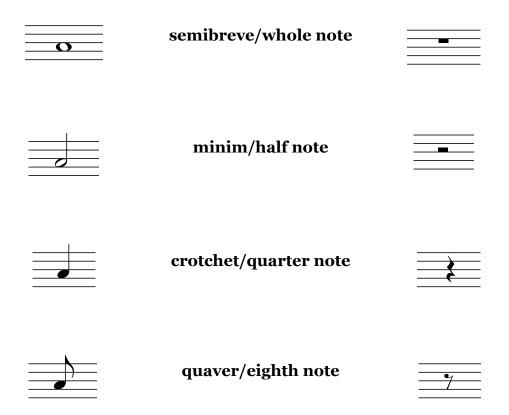

Beginners' piano course: Lesson 12 notes

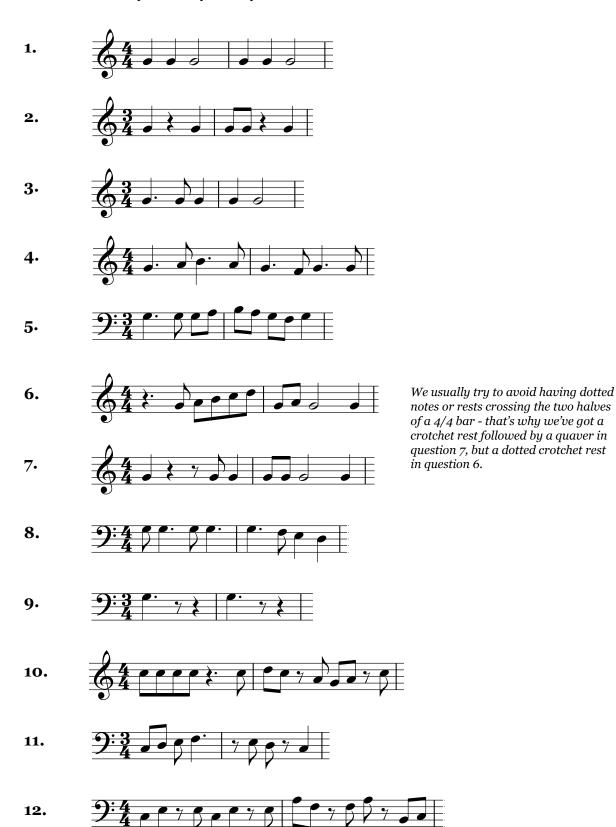

1. Notes and rests - a reminder...

2. Rhythm exercise

Work out the rhythm of each of the following excerpts. If you need to, print off the sheet and mark in the beats, as I demonstrated in the lesson.

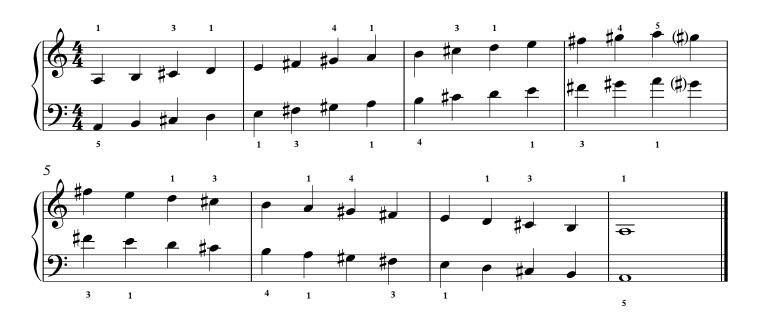

You might find it easier to work them out away from the piano keyboard. If I'm trying to work out a complex rhythm I'll often use my hands on my thighs: the left hand beats time on the left thigh, the right hand beats out the rhythm - try it for yourself.

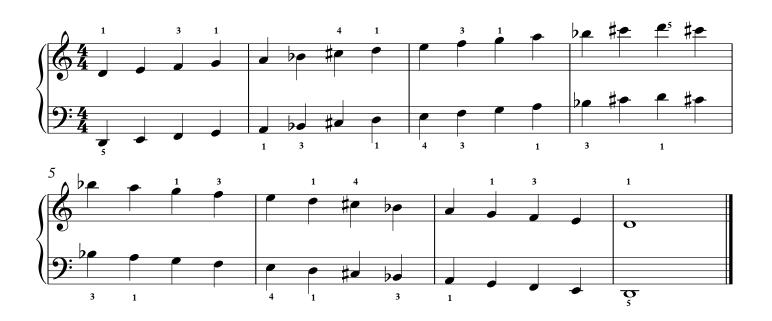

3. New scales from this tutorial

I've spaced the right and left hands of the two D minor scales two octaves apart to make reading easier. Play them as written, or, better still, play the right hand an octave lower or the left hand an octave higher than written.

Minuet in G

from The Anna Magdalena Notebook

Christian Petzold (misattr. to J.S. Bach)

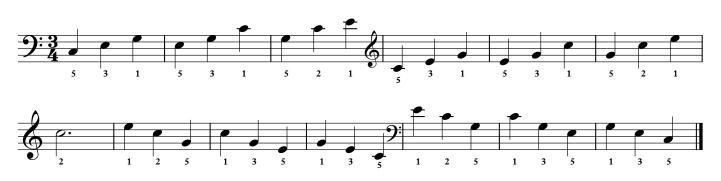

Beginners' piano course: Lesson 16 notes

As I said in the tutorial, when notating some of these broken chords I've changed clef in the middle of a stave to make reading easier. Don't change hands - the right hand can play bass clef and the left treble clef. The only thing you need to do is make the mental switch from reading one to the other when you pass a clef change.

Major scales (hands separately and together):

A, D and G, both natural and harmonic minors

Broken chords (hands separately, together if you're brave...):

C and G major; A minor and E minor

Tutorial links

As I said in the tutorial, I've included chord symbols in the score for those of you who are interested in blues and jazz improvisation. If you want to get started in thos styles, here are some useful playlists:

Blues piano tutorials (some of these are quite old now, but still worth a look)

Jazz piano for beginners

Various tutorials on chords

Useful books

You're now at the stage where you should be able to make good use of my book, *How To Really Play The Piano*.

Print edition (Amazon UK)

Print edition (Amazon US)

Print edition (international)

Digital edition (PDF download)

Beginners Piano Course: Lesson 18 notes

The score for "Für Elise" is on the next page.

Podcast link

As I said in the lesson, I've recently appeared on the Musicality Podcast. You can listen here:

www.musical-u.com/learn/how-to-really-play-music-with-bill-hilton/

It's also available from most major podcast distributors (iTunes, etc.). In it, we touch on quite a few interesting topics, including what it's like to learn piano as an older beginner, and why more mature learners actually have more advantages than you might think.

Full score of "Für Elise"

If you want a print edition there's probably a copy of Beethoven's "Für Elise" in every music store in the world, though you might have to buy it as part of a collection. Likewise, Amazon and other online retailers will have lots of editions. If you want a free digital copy you'll find several editions at www.imslp.com, the online database of public domain music.

It's worth having a look around IMSLP, as there's tons of good music there entirely for free. If you end up using it often, please do consider supporting the site financially if you're able to.

How To Really Play The Piano

As I said in the tutorial, by this stage you should be more than capable of making use of my book, *How To Really Play The Piano*, which covers all the stuff about chords, improvisation, jazz, blues, pop and so on that I'm deliberately avoiding in the beginners' tutorials, but which I cover in other tutorials on my YouTube channel. Find out more about the book here:

www.billspianopages.com/how-to-really

Practise, practise, practise!

You'll find "Für Elise" pretty challenging, but don't forget to practise the scales and broken chords we've learned so far, and any earlier pieces you're still working on!

from Klavierstück in A-moll ("Für Elise")

Beginners Piano Course: Lesson 19 notes

New scales from this tutorial

For the new minor scales from this tutorial (E minor and C minor) I've only scored out the natural minors below. You should now be able to figure out the harmonic minors for yourself: the fingers are the same as for the natural minors. The only difference is that the seventh note of the scale is sharpened by a semitone in the harmonic minors. So the D in E natural minor becomes D sharp in E harmonic minor, and the Bb in C natural minor becomes B natural in C harmonic minor.

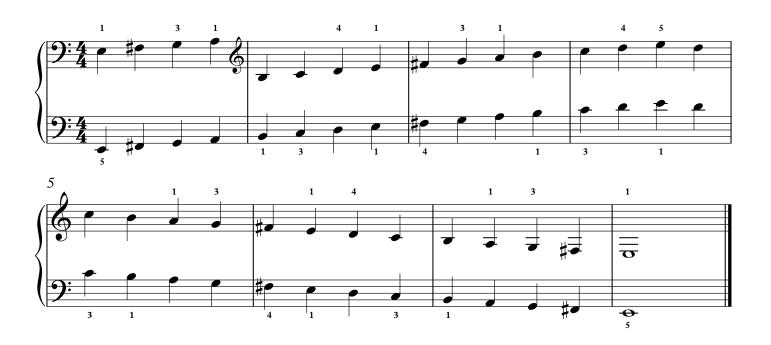

E major

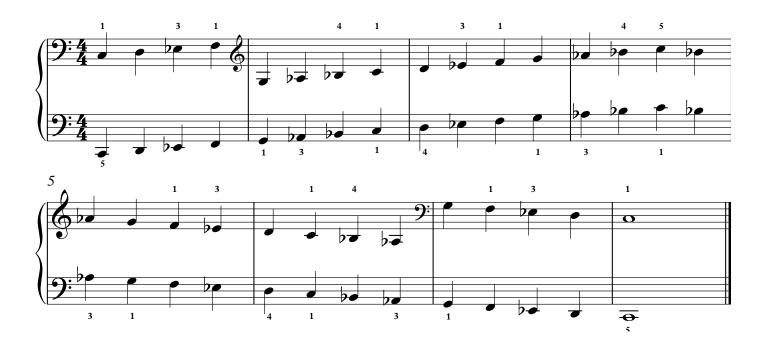

Eb major

E natural minor

C natural minor
